**Eco-Conscious Products**

Safe and environmentally friendly products

Okamura’s environmental priorities in product design and assessment ensure the delivery of safe, eco-conscious products that give consumers peace of mind.

A harmony of design, ecology, and economy

Okamura reduces raw material inputs during manufacture by analyzing finite elements with CAE and adopting other leading-edge methods. We harmonize design, ecology, and economy.

Keeping clean air

The furniture is a critical part of any office space. This is another factor that motivates Okamura to protect the air quality of offices by positively using raw materials and paints free of volatile organic compounds (VOCs).

Designs for easier reuse and recycling after use

Okamura designs products that can be easily broken down into homogeneous materials to facilitate the reuse of parts recovered from post-use products and material recycling. The materials used in major components are clearly identified.

#### Product planning assessment

- Functions, performance, design
- Product safety
- Environmental consciousness
- Price
- Responses to regulations

#### Product assessment

- Material selection
- Efficiency in material use
- Energy efficiency
- Ease of disassembly
- Recyclability

#### Eco-conscious production

- Conserving energy
- Mitigating harmful emissions
- Zero emissions

#### Requirements in product design

- Conserving resources and reducing volume
- Using recycled materials
- Reusing materials and product parts

- Ease of recycling
- Sound air quality
- Product safety

- Reduced packaging materials
- Information disclosure

#### Design for the environment

Zephyr’s resin back frame, a design based on a simulated analysis of finite elements, bespeaks the outstanding efforts behind Okamura’s eco-conscious designs. Okamura’s product developers optimize the use of resources by minimizing the amounts of materials used without sacrificing the outstanding quality, strength, and safety of the products.

#### Product testing

- Measuring the volumes of VOCs emitted
- Testing durability and load bearing strength
- Testing stability
- Testing for transport
- Measuring the volumes of specific harmful substances
Okamura indicates the materials used to facilitate recycling after use.

**Recycled materials:** 58%

Recycled materials are used in aluminum and resin parts. These materials make up about 58% by product weight.

**Recyclability:** 93%

With future recyclability firmly in mind during the design stage, we use homogeneous materials as much as possible. After use, our products can be collected and disassembled into homogeneous materials.

- **Resins**
  Polymide resin is used to ensure recycling in the future. Resins recovered after use are reprocessed and reused by resin manufacturers. Okamura is an active user of recycled resins for its products.

- **Aluminum**
  Recovered aluminum is processed into a recycled form by alloy manufacturers and later into aluminum. Energy consumption can be reduced by 97% by generating recycled metal from recovered aluminum rather than creating aluminum from its source material bauxite.

- **Steel**
  Steelmakers use recovered steel to produce new steel. Steelmaking with recovered steel consumes 75% less energy than steelmaking from iron ore.

**Indicating materials**

Okamura indicates the materials used to facilitate recycling after use.
Reducing Chemicals

GREENGUARD certificated
GREenguARD is an indoor environment air quality standards used to certify products with low chemical emissions for the protection of interior environments. Certification is granted only to products that pass the pollutant emissions testing conducted in process-controlled dynamic environmental chambers following test protocols developed by Air Quality Sciences, Inc. The test protocols comply with ASTM, U.S. EPA, LEED, and BIFMA standards and requirements. Zephyr received GREENNUGUARD certification in July 2011.

Reducing VOCs to safeguard health
Okamura minimizes the use of formaldehyde, toluene, xylene, and other VOCs, which can result in sick building syndrome and allergic dermatitis. To cite just one example, the snugly fitting backrest meshes of Zephyr were accomplished using an original design requiring a minimal amount of adhesive. Environmental load can be reduced while achieving outstanding comfort and strength.

Minimizing environmental load
Amid calls to limit the use of the earth’s resources, the reuse and recycling of post-use products are now a global agenda. To ensure safe and sure progress in recycling, manufacturers must limit the use of substances with environmental loads. The latest round of enhancements in the regulatory framework started with the European Parliament’s Restriction of Hazardous Substances (RoHS) directive. Though office furniture is not currently included among the targets of this regime, Okamura is working to reduce substances with environmental impacts in response to customer demand and in anticipation of future legislation.

GREENGUARD Emission Criteria

<table>
<thead>
<tr>
<th>Emission Types</th>
<th>Measure</th>
</tr>
</thead>
<tbody>
<tr>
<td>Individual VOCs</td>
<td>&lt;0.1TLV</td>
</tr>
<tr>
<td>Formaldehyde</td>
<td>&lt;0.025ppm (=0.03mg/m³)</td>
</tr>
<tr>
<td>4-phenylcyclohexene</td>
<td>&lt;0.0033mg/m³</td>
</tr>
<tr>
<td>Total VOCs</td>
<td>&lt;0.25mg/m³</td>
</tr>
<tr>
<td>Total aldehydes</td>
<td>&lt;0.05ppm</td>
</tr>
</tbody>
</table>

Reductions in VOCs
- Toluene
- Xylene
- Formaldehyde
- Aldehydes
- 4-phenylcyclohexene

Reducing substances with environmental load
- Lead
- Mercury
- Cadmium
- Chromium VI
- PBB (Polybrominated biphenyl)
- PBDE (Polybrominated diphenyl ether)

*1 These standard values contain exemptions set in the RoHS directive.
*2 Directive put into effect in European Union member states in July 2006 to restrict the use of hazardous substances in electronic and electrical equipment.
